5 Effect on the shareholders

5.1 Price Dilution

Exercise Price = The weighted average closing price of the Company's ordinary shares traded on the SET during the period of 15 business days prior to the 2013 Annual General Meeting of Shareholders of the Company which approves the issuance and offering for sale of the Warrants to Executives and Employees of the Company and/or its subsidiaries No. 2.

Market Price = means the weighted average price of the Company's ordinary share price traded on the SET during the period of 15 business days prior to the date of the 2013 Annual General Meeting of Shareholders of the Company which approves the issuance and offering for sale of the Warrants to Executives and Employees of the Company and/or its subsidiaries No. 2.

The exercise price of the Warrants allocated to the Executives and Employees is Baht 87.52 * per unit, which is not lower than the market price. As a result, the issuance and offering for sale the Warrants allocated to the Executives and Employees will not contribute to the price dilution.

* This is the price established for calculation of the potential price dilution. Such price is based on the weighted average closing price of the Company's ordinary shares traded on the SET during the period of 15 days prior to the date of the Board of Directors Meeting which resolved to propose the issuance and offering for sale of the Warrants No. 2 under the BJC ESOP 2012 Scheme to the 2013 Annual General Meeting of Shareholders of the Company for further approval.

$$\frac{\text{Market price before the offering} - \text{Market price after the offering}}{\text{Market price before the offering}}$$

Market price after the offering =

$$\frac{(\text{Market price} \times \text{No. of paid-up shares}) + (\text{Exercise Price} \times \text{No. of shares reserved for this offering})}{\text{No. of paid-up shares} + \text{No. of shares reserved for this offering}}$$

$$= \frac{(87.52 \times 1,588,125,000) + (87.52 \times 16,000,000)}{1,588,125,000 + 16,000,000}$$

$$= \frac{140,393,020,000}{1,604,125,000}$$

= Baht 87.52

Therefore, Price Dilution:

$$= \frac{87.52 - 87.52}{87.52}$$

= 0%

5.2 Control Dilution

In the event all Warrants are exercised by the Executives and Employees of the Company and/or its subsidiaries, the control dilution effect on the ownership and the voting rights of the existing shareholders after the exercise will be as follows:

Number of shares reserved for this offering : Not exceeding 16,000,000 shares (at the par value of Baht 1)

Total Number of shares of the Company sold : 1,588,125,000 shares (at the par value of Baht 1)

Maximum Control Dilution : 0.00997 %

$$= \frac{\text{Number of Shares reserved for this offering}}{\text{Number of paid-up shares} + \text{Number of shares reserved for this offering}}$$

$$= \frac{16,000,000}{1,588,125,000 + 16,000,000}$$

$$= \frac{16,000,000}{1,604,125,000}$$

= 0.00997 %
